

THREE EXCITING WAYS TO MOVE

Three is the magic number for the VISION X. A first for ŠKODA, this concept has several powertrains integrated into the car, giving you three ways to power through your day when you factor in a seven-speed 1.5 TGI (Turbo Gas Injection) with starter generator, all-wheel drive with electric rear axle, plus a CNG (Compressed Natural Gas) option reducing CO₂ to 89 g/km.

And even when the driving stops the VISION X still delivers excitement with three additions for playtime in the boot: integrated electric-powered longboards, award-winning designed safety helmets, plus an integrated drone with embedded camera to record the action.

THE CONCEPT WITH THE X-FACTOR

ŠKODA is excited to announce another sibling in the SUV family, the VISION X. This Crossover segment entry concept is ŠKODA's most compact and dynamic yet.

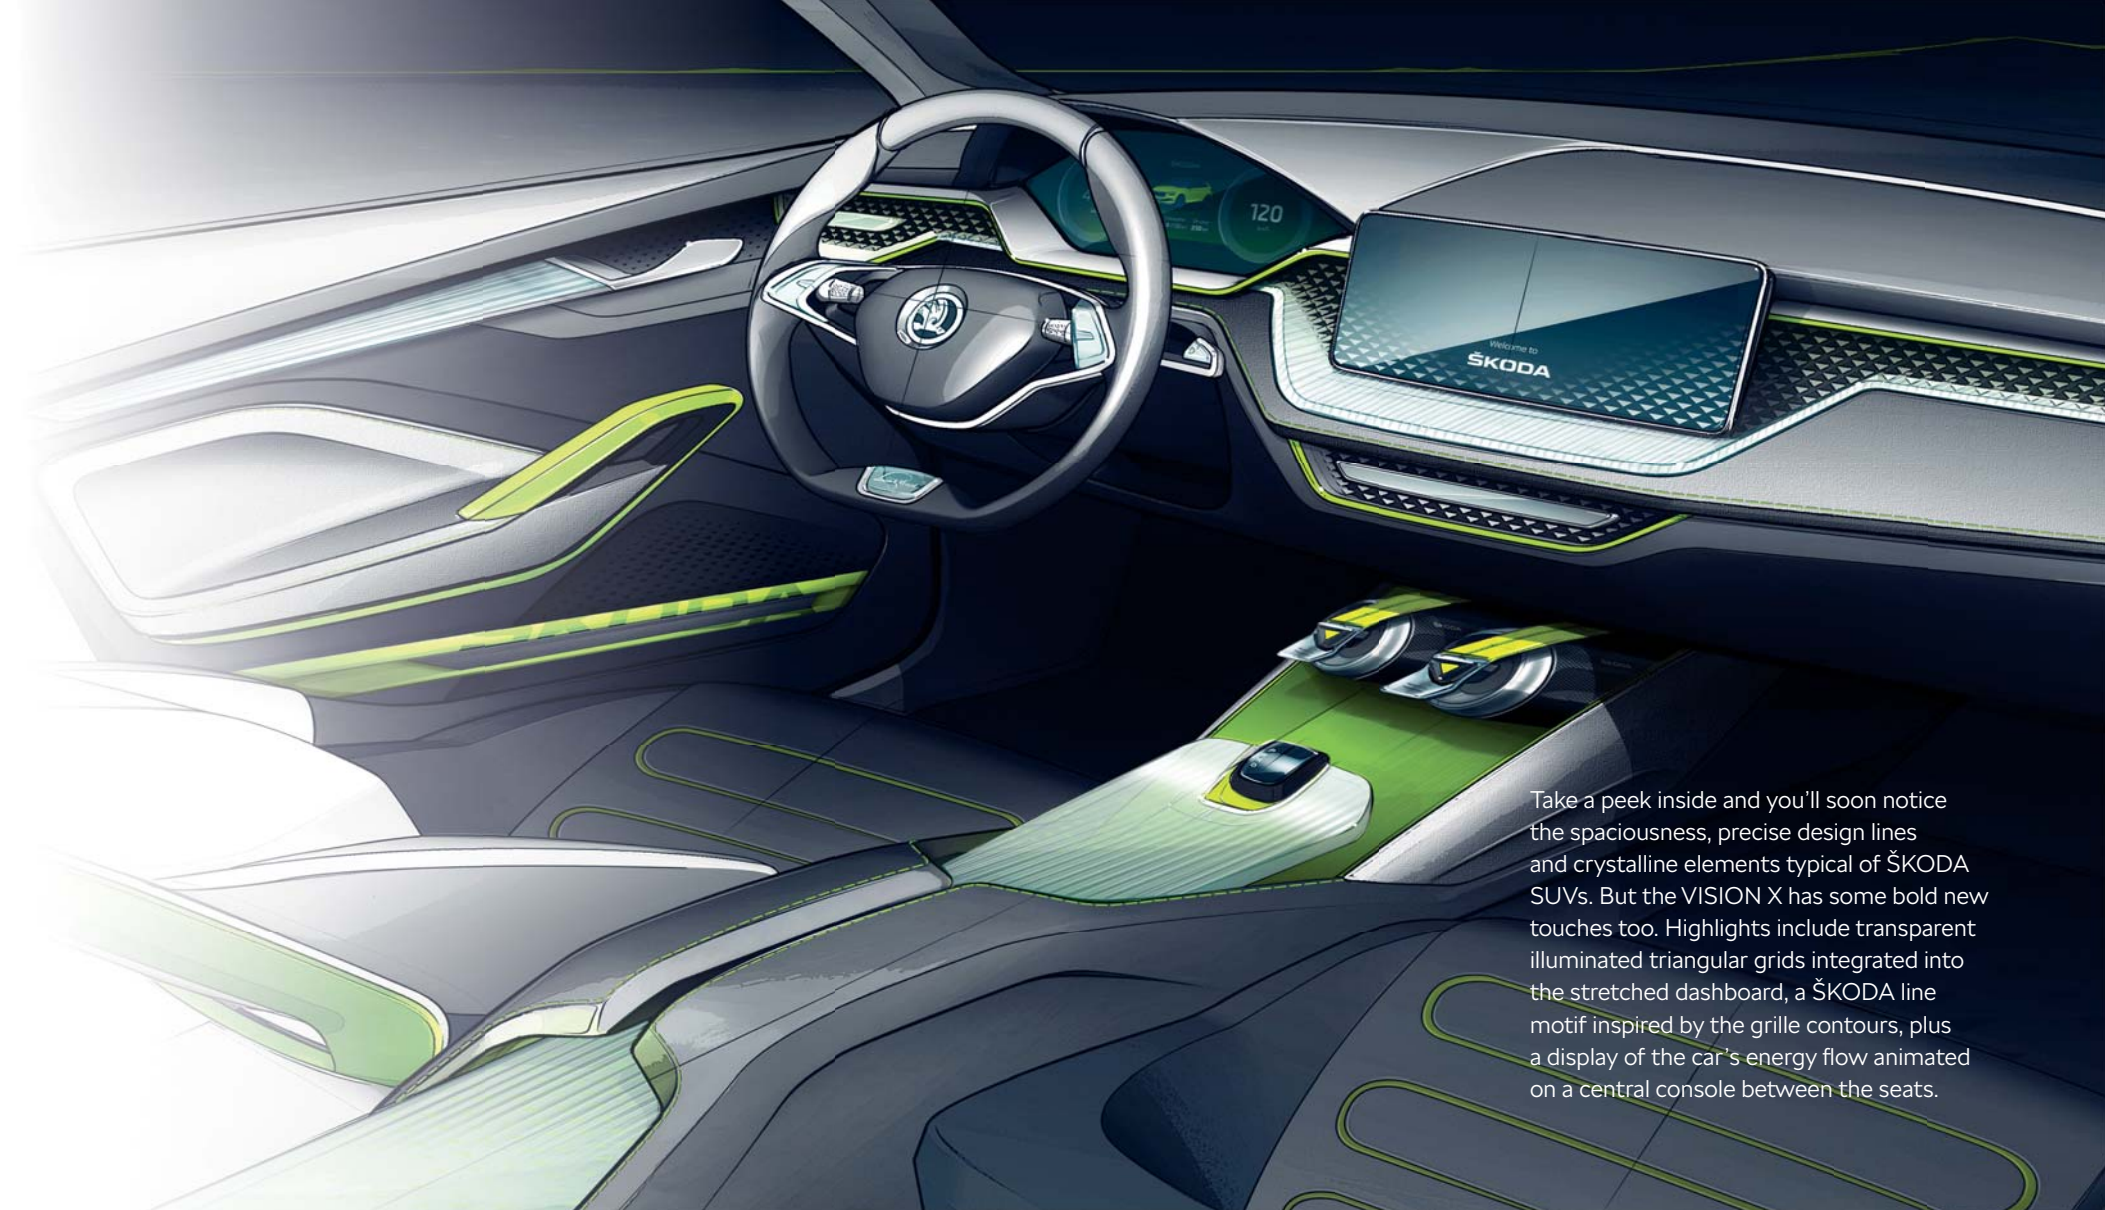

CROSS THE LIMITS

It has the same distinctive design lines, robust feeling and imposing stance, but the VISION X has some X-tra special touches to make this concept an adrenalin rush – even when standing still.

Uniqueness is the byword for the VISION X, with exterior dynamism matched inside with 'Sport-Clever' details, plus some special toys for grown-ups integrated into the boot.

So, when we say this car has the 'X-Factor', we really mean it.

Take a peek inside and you'll soon notice the spaciousness, precise design lines and crystalline elements typical of ŠKODA SUVs. But the VISION X has some bold new touches too. Highlights include transparent illuminated triangular grids integrated into the stretched dashboard, a ŠKODA line motif inspired by the grille contours, plus a display of the car's energy flow animated on a central console between the seats.
