When choosing winter complete wheels, it is necessary to refer to the data stated in the technical certificate of your vehicle.

Why choose ŠKODA Accessories

With us, you are assured of products and accessories that were designed specifically for the individual ŠKODA models. We provide you with a one-stop-shop for not just a wide range of complete winter wheels, but also other accessories like snow chains and ski racks. We combine the rims from ŠKODA Genuine Accessories with tyres from renowned manufacturers who meet strict European standards, thus making sure you only receive the very best. Technology is nothing without a personal touch. When choosing your tyres or accessories, our extremely qualified personnel will guide you at every step.

Why choose Complete Wheels

Winter is around the corner and you must perform the necessary but boring task of taking the summer tyres off the rims and fitting the winter ones. However, such repeated mounting and demounting of the tyre from the rim can deform both. With Complete Wheels you buy the rim and the wheel as a set which makes changing tyres safer and simpler. The product consists of a lightweight alloy wheel (including a wheel-centre cap with the ŠKODA logo). There is a possibility to purchase a set of hub covers for complete steel wheels.

ŠKODA +Tyres

As it launches the ENYAQ iV, its first model built on the group's MEB platform, ŠKODA has also come up with a new Tyres strategy. The tyres, tailor made so that they are specially adapted to the characteristics of each model, benefit customers by delivering enhanced comfort, quality, safety and an increased electric range. The ŠKODA Genuine +Tyres are engineered to original equipment standards and, to make them easily recognisable, they have a special mark on the sidewall in the form of a +.

How to care for your tyres when they aren't turning

Usually, the chemical and physical processes in the tyre material cause it to age. However, in properly stored tyres and Complete Wheels, these processes are much slower, thus extending their life.

A few tips:

- Store the tyres in a cool, dry place.
- Keep them away from direct light, chemicals and ozone sources.
- Before storing, use a tyre brush to remove brake dust, dirt and grime.
- If possible, avoid any moisture from entering the tyres.

Tyres with rim

Tyres without rim

While all tyres will eventually age, following the above precautions will help them retain their original wellbalanced properties for much longer.

Like everything else, check the label first

Just like with food in a supermarket, labels on new tyres help you find your way amongst the options. They inform and encourage you to choose tyres that are safer, more economical and also ecological.

The European Union regulation on mandatory marking of new tyres has been in operation for many years. The tyres sold in EU bear a label similar to those on home appliances, identifying the performance class in three criteria:

- fuel efficiency
- wet adhesion
- outside noise.

While the information on labels is important, it's not the only guide to correct tyre selection. For your maximum comfort and safety, it is necessary to start from your individual needs and stick to the tyre dimensions stipulated by the vehicle manufacturer.

Use this QR code to find out more about the EU Tyre labelling (EPREL database) so you can make an informed purchase decision when you replace your tyres.

Fuel consumption Rolling resistance
Reducing rolling resistance results in fuel savings, thereby reducing CO₂ emissions. The classification is given in classes from A (green) to E (red). **±0.1 l per 100 km for each class.**

Grip in wet conditions Braking performance
The crucial factor for safety is, among other things, the grip of the tyres in wet conditions. Here, the braking power is divided into classes A to E. The difference in braking distances between individual classes on a wet road at default speed of 80 km/h is between 3–6 meters, i.e. more than the length of the vehicle. **≥ 18 meters difference in braking distance**

Exterior noise
As it is understood from the loudspeaker symbol, this classification visualizes the intensity of the noise that the tyre emits as a result of contact with the road while it is in motion. Exterior noise levels are measured in decibel (dB) and calculated in accordance with UNECE Regulation No 117. The external rolling noise class shall be determined and illustrated on the tyre label in classes from A to C.

Snow grip
The tyre, which satisfies the minimum snow grip values set out in UNECE Regulation No 117, shall be classified as a tyre for use in severe snow conditions and the following pictogram shall be included on the tyre label.

Ice grip
The tyre, which satisfies the minimum ice grip index values, shall include the following pictogram. The ice grip performance should be tested in accordance with reliable, accurate and reproducible methods determined by the regulation.

TPMS COMPLETE WHEELS

If your vehicle is equipped with optional TPMS (tyre pressure monitoring system with electronic valves) you need to use winter complete wheels with TPMS valves.

ŠKODA Tyres Guarantee

Even the highest quality tyres aren't totally immune to the baits they encounter on the road. Whether caused by nails, sharp curbs or rocks, tyre damage is usually so extensive that you must purchase a new one. This is why the ŠKODA Tyres Guarantee programme ensures that a destroyed tyre won't upset your finances. With this guarantee you can enjoy a discount of up to 70% on the new tyre price. You automatically qualify for this Guarantee when you buy the complete winter wheel package from an authorised ŠKODA business partner. The guarantee is provided for individual tyres, regardless of how many you purchase. It applies to non-repairable damage caused in normal operation, including, but not limited to, running onto a curb. If you have the lifetime guarantee of mobility valid, you can also have your vehicle towed to the nearest ŠKODA authorised service shop. The discount amount (as well as the guarantee duration) depends on the depth of the tyre tread profile, with the limit being 5 mm. Warranty claims may be applied within 3 years from the purchase of the complete winter wheel. You can register the guarantee with any ŠKODA authorised partner in your country.

ENJOY WINTER EVEN IN BAD WEATHER

Winter Equipment

The obligation to use the winter tyres depends on the legislation of your country. Nevertheless, not only the obligation itself is in question, but also your safety during the winter months when communications might be covered by a continuous layer of snow, ice or glaze.

It helps to remember that:

- risk of accident is six times higher in winter
- summer tyres lose their capacities at temperatures below +7 °C

Head out to the mountains to indulge in winter adventures regardless of the weather. All you need: winter tyres on all four wheels with the minimum tread profile of 4mm!

Benefits of Winter Tyres:

- they are made of mixtures specially developed for the winter period
- they have better adhesion at temperatures below + 7 °C as compared to summer tyres, which also results in shorter braking distance
- they perform well not only on snow-covered roads, but also on wet roads or on dry, cold surfaces
- thanks to the special treading, they drain the water better, reducing the risk of aquaplaning
- they keep the course better and can grip even when you run on snow

Additional tyre facts:

- new tyres are considered run-in after about 300 km
- tyre pressure needs to be checked for several times during winter

Contact your authorized ŠKODA partner to ask about the possibility of having your winter wheels stored during summer, and vice versa.

Impact of Winter Tyre Tread Depth on Braking Distance

On snow-covered road

Tread depth

Comparison of Braking Distances of Winter and Summer Tyres

On dry road from 60 km per hour.

On snow from 50 km per hour.

On snow from 30 km per hour.

PROFESSIONAL WHEELS ASSEMBLY

The benefits of an expert assembly:

- A guarantee of quality and professional installation directly by the wheels assembler.
- The same quality as for the wheels that come with the cars directly from the series.
- The complete assembly fully automated.
- The final product finally goes through a physical inspection performed by authorized personnel. The reason for that is the visual quality control.

The advantages of the complete winter wheels:

- Saving the expenses for changing tyres while also saving time
- When purchasing a complete winter wheels from ŠKODA AUTO a. s., the customer also gets the ŠKODA Tyres Guarantee.

ŠKODA Genuine Accessories are offered by ŠKODA as optional extras at additional charges. Colours, designs and materials may differ from those in the illustrations. Information such as specifications, appearance, performance, dimensions, weight, fuel consumption and operating costs relating to the illustrated vehicles and products is based on information available at the time of printing this document, and ŠKODA AUTO reserves the right to change these data. Correct rim and tyre size combinations are available in the Registration Certificate and/or from your dealer. When choosing snow chains, make sure to follow the indication in your car's certificate of roadworthiness. Wheels depicted on the cars may not be part of the available range. Please contact your ŠKODA Partner for information as to which products are available and suitable for your model, what restrictions apply, the installation times required and costs. Subject to change without notice.

Vehicle parameters such as weight, rolling resistance and aerodynamics may vary depending on additional equipment and accessories (attachments, tyre sizes, etc.) and may, together with weather, traffic conditions and individual driving styles, affect fuel consumption, electricity consumption, CO₂ emissions and other performance parameters. ŠKODA Genuine Accessories are not used to determine consumption and emission levels, and can therefore only be fitted after the vehicle's first registration.
