TRIBODIAGNOSTIKA - PRESENT

Actual status overview

Analysis

„ We measure all key parameters of lubricants“

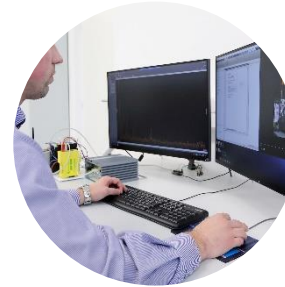

Filtration

„ Carefull care we prolong the life of lubricants“

Inovation

„ We develop new procedures in Tribodiagnositics“

Digitalization

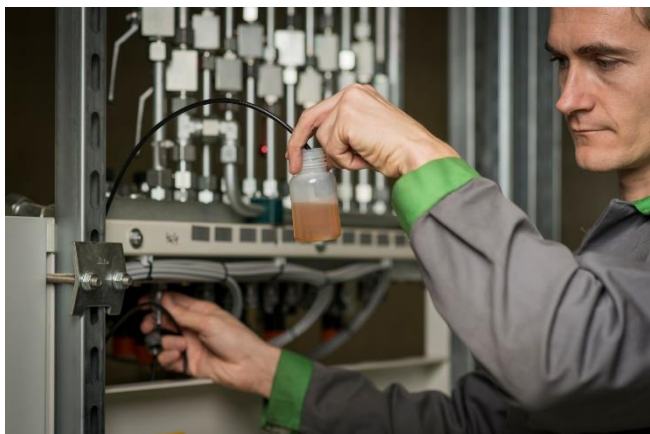

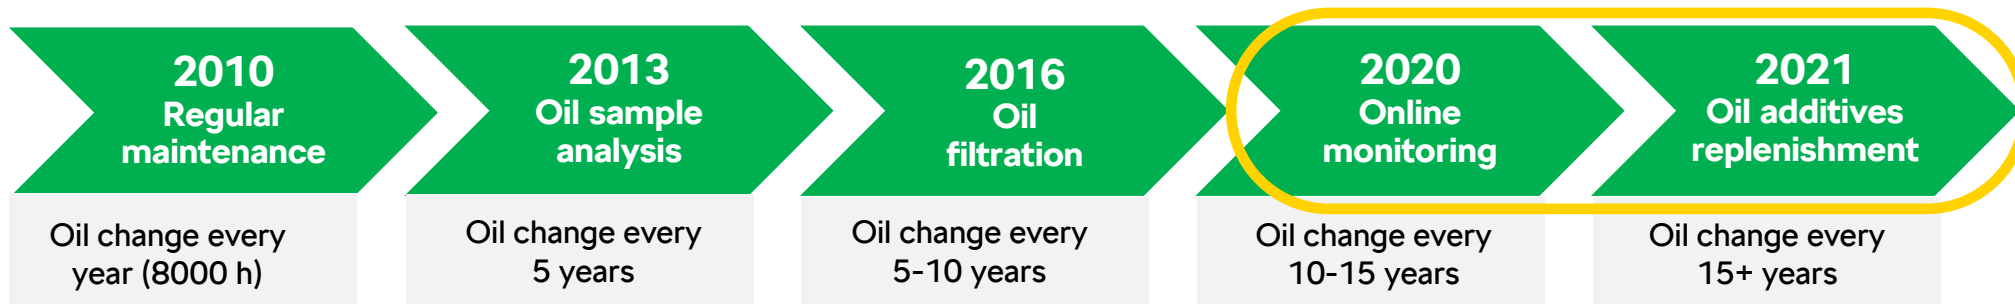

„We digitize expediently“

- Care of 420 machine
- 500 m³ of oil
- 869 sampels/years
- Savings 600 ths./year

Oil care evolution

Timeline to Fluidmanagement

Oil sampling from the machine

Laboratory sample analysis

By-pass oil filtration

News in tribodiagnositics

New procedures and principles

Online
monitoring

Installation of sensors on key
machines and online
monitoring of oil and
machine status
(2021 – PXL 1, 2, 3)

Actual condition and trend of machine PXL 2 (M4)

Water amount (%RH)

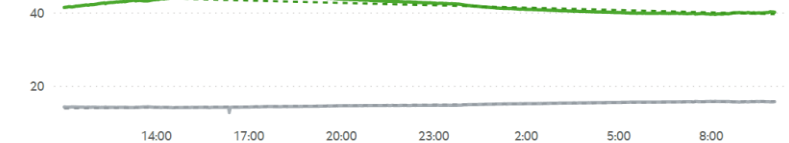

Oil temperature (°C)

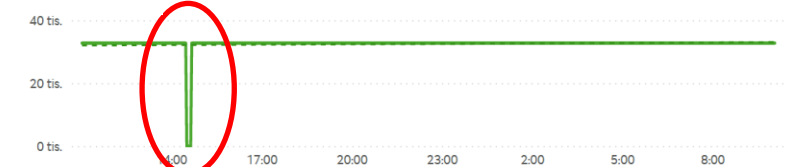

Code mech. particles (ISO 4406)

12/9/5

● Temperature (°C) ● Water amount (%RH)

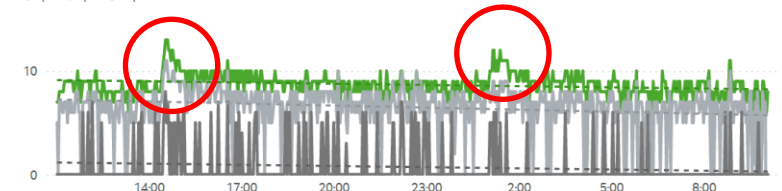

Flow

Mechanical particles amount

● 4µm ● 6µm ● 14µm

News in tribodiagnostics

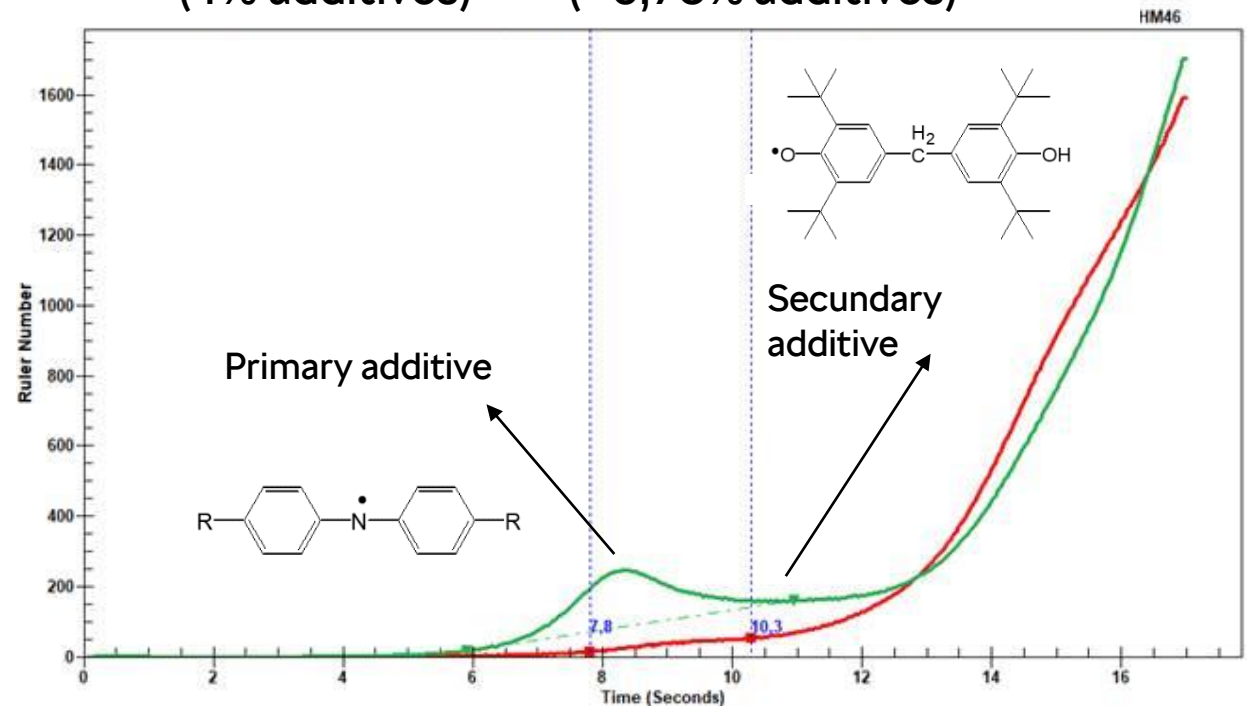

New procedures and principles

**Oil additives
replenishment**

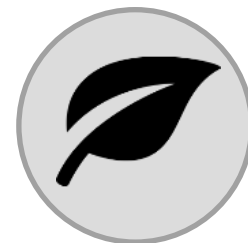

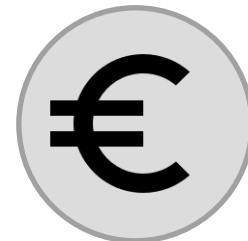

**By adding additives to old
oils, we will extend the life of
oils by a total of 15 years**

new oil (1% additives) **„dead“ oil (<0,75% additives)**

TRIBODIAGNOSTIK - FUTURE

- New kinds of oil– increase of filtration volumes by 10% (Saving 120 ths. € / year)
- Extension of knowledge in Online Monitoringu
- PoC - Oil additives replenishment (Saving 25 ths. € / year)
- Sustainability, CO₂ - reduction (1L Öl = 2,3 kg CO₂ => 500 m³ = 1 150 t CO₂)
- Total saving – 745 ths. € / year
- Oil life = Machine life
